Client Reviews

Success Stories

I pride myself on providing high quality full-stack solutions tailored to the requirements of each company. objectives. I am more of a client-oriented approach. satisfaction and sustainable collaborations. This is what companies that have expanded as a result of my experience in backend/frontend development, Scalable architectures say, API integration.

“

Despite the tight deadlines, He executed the task with remarkable efficiency and precision. His communication was exemplary, ensuring I was informed at every stage of the project. His expertise in web development was evident in the quality of the final product.

“

He supports you through multiple changes and are patient to understand your need and cater to it accordingly. I would strongly recommend him for your web designing projects. The design and delivery of the project was on point with my expectations. He is also value for your investment.

“

He was not only highly skilled but also extremely responsive throughout the entire project. Whenever we had questions or needed adjustments, he was quick to respond and always delivered high-quality work. His professionalism and dedication ensured that our website was completed on time and exceeded our expectations.

#0003

Hello, I'm M Alyaan Amir!

Introduction

I have 4+ years of experience as a Full-Stack Software Engineer (python based backends and modern frontend architecture), where I design scalable and secure applications, APIs, and intelligent systems that automate business processes and generate meaningful business outcomes.

Website/App Development

SEO Excellence

- Precision Keyword Strategies
- Technical Optimisation
- Content & Backlink Strategy

SaaS Portfolio

Hubble42

Quran Sentimental Analysis

The platform provides real-time emotion analysis, personalized Quranic guidance, contextual verse suggestions, analysis history, and export/share capabilities. Backend services handle sentiment detection, AI-powered verse matching, user interaction logging, and API endpoints for history, search, and statistics. Scalability and reliability ensure smooth performance across devices with responsive design, theme toggling, and rich animations.

Frontend: HTML5, CSS3, JavaScript (ES6+), responsive UI/UX, Font Awesome, Google Fonts

Backend: Python Flask, REST APIs, CSV export, data management

Other Tools: Emotion Analysis, Verse Search, Toast Notifications, Theme Persistence, Keyboard Shortcuts

#0005

Hubble42

Debate Master

The platform enables structured debates against an AI that always takes the strongest opposing stance. Backend services manage debate sessions, real-time scoring, logical fallacy detection, and final verdict generation. Scalability and responsiveness ensure smooth turn-based interactions, live scoring, and multi-role LLM processing across devices.

Frontend: React, Framer Motion animations, Lucide icons, responsive dark theme

Backend: FastAPI, async Groq API integration, in-memory/Redis session management

LLM: Groq llama-3.1-8b-instant with specialized roles (Opponent, Evaluator, Fallacy Detector, Judge)

#0006

Hubble42

Query Genius

The platform enables natural-language querying of uploaded datasets with AI-powered SQL generation, interactive visualizations, and dashboard management. Backend services handle dataset ingestion, schema analysis, AI query processing via LangChain & Groq Llama 3.1, SQL generation, and user dashboard operations. Scalability and responsiveness ensure smooth performance for large datasets with real-time feedback and visualization.

Frontend: React 18, Vite, Tailwind CSS, Lucide icons, React Plotly.js, responsive dark/light theme

Backend: Python 3.9+, FastAPI, LangChain, Groq API, SQLAlchemy, Pandas, Pydantic

Database & Storage: SQLite (dev), local file storage, optional PostgreSQL/MySQL for production

AI SaaS Portfolio

ReadHub

AI-based Web Application

The platform enables users to search, discover, and access books through a unified interface, offering public-domain PDF downloads, favorites management, and purchase redirection to trusted retailers. Backend services handle book search aggregation via external APIs, favorites persistence, and download/link resolution. Performance and responsiveness ensure smooth browsing, saving, and discovery across all devices.

Frontend: React (latest), Tailwind CSS, Lucide React icons, responsive UI with animations

Backend: Python Flask, REST APIs, SQLite for favorites and search history

External Services: Open Library API, retailer redirection (Amazon, Barnes & Noble, etc.)

#0008

PersonaChess

AI-based Web Application

The platform reimagines chess with personality-driven AI opponents, natural language reasoning, adaptive coaching, and narrative gameplay. Backend services manage game state, AI personality logic, coaching insights, and post-game analysis using structured prompt templates. Real-time interaction, smooth animations, and psychological profiling deliver an immersive and educational chess experience across devices.

Frontend: React, Tailwind CSS, Framer Motion animations, Lucide icons

Backend: FastAPI, Python Chess, Jinja2 prompt templates, REST APIs

AI: Groq API with LLaMA 3.1 (8B Instant), personality-based prompting

#0009

KnowledgeAI

AI-based Web Application

The platform transforms YouTube videos into structured learning assets including summaries, chapters, flashcards, quizzes, and key definitions using high-speed AI pipelines. Backend services handle transcript extraction with multi-level fallbacks, semantic chunking, vector storage, and parallel LLM chains for content generation.

Frontend: React 18, custom CSS theming, glassmorphism UI, responsive design, animated components

Backend: FastAPI, Uvicorn, REST APIs, transcription pipelines

AI & ML: Groq Llama-3.1-8b-instant, Groq Whisper Large V3 Turbo, sentence-transformer embeddings, vector search (ChromaDB)

#0010

Python Portfolio

AI Recommender

AI-based Web Application

The platform analyzes uploaded datasets to automatically detect problem type, suggest target variables, and recommend top-performing machine learning models. Backend logic evaluates dataset characteristics, ranks suitable algorithms, and generates ready-to-use Python code with explanations and visual insights.

Frontend & App Layer: Streamlit, interactive widgets, responsive layout

Backend & ML: Python, scikit-learn, Pandas, NumPy, model evaluation pipelines

Core Capabilities: Problem type detection, target column inference, model ranking, feature importance, performance metrics, auto-generated code

#0011

DocuCraftAI

AI-based Web Application

The platform transforms raw, unstructured text into professional documents by intelligently analyzing content structure and recommending optimal output formats. Backend logic performs advanced text analysis to detect headings, tables, lists, and mixed content, then generates polished documents with appropriate styling and layouts.

Frontend & App Layer: Streamlit, custom CSS styling, responsive UI

Backend & Processing: Python, NLTK, Pandas, regex-based structure detection

Document Generation: python-docx, reportlab, openpyxl, odfpy

#0012

Educational Portfolio

DreamOracle AI

AI-based Web Application

The platform transforms user-provided text into high-quality visual artwork using a deep-learning-based StackGAN image generation pipeline. Backend services manage AI inference, user authentication, credit validation, payments, and history persistence, while the React frontend delivers a smooth, gated experience with engagement features.

Frontend & App Layer: React.js, responsive UI, component-driven design

Backend & AI Engine: Python, Flask, StackGAN for text-to-image generation

Authentication & Security: Firebase Google Authentication, access-controlled routes

#0013

YellowForgeAI

AI-based Web Application

The platform converts plain-text ideas and PDF-based requirements into complete, production-ready Streamlit applications using a high-speed LLM inference pipeline powered by Groq. The system parses user intent, UI preferences, and functional requirements, then automatically generates clean, modular Streamlit code along with full project scaffolding.

Frontend & App Layer: Streamlit, custom CSS, responsive layouts, smooth animations

AI & Backend Logic: Python, Groq API integration, Llama-3.1-8B-Instant model

Input Processing: Text-based requirements, PDF extraction via PyMuPDF and pdfplumber
